<b>Extinguishing Media</b>	CO2, dry chemical, or foam. Water can be used to cool and protect exposed material.
<b>Firefighting Procedures</b>	Recommend wearing self-contained breathing apparatus. Water may cause splattering.
<b>Unusual Fire &amp; Explosion Hazards</b>	None known.

<b>6</b>	<b>Accidental Release Measures</b>
----------	------------------------------------

<b>Spill Procedures</b>	Personal Protective Equipment must be worn, see Personal Protection Section for PPE recommendations. Ventilate area if spilled in confined space or other poorly ventilated areas. Prevent entry into sewers and waterways, dispose of in accordance with all federal, state and local environmental regulation. Pick up free liquid for recycle and/or disposal. <b>Exposure Limits</b>	None established
<b>Other Exposure Limits</b>	Contains mineral oil. Under conditions which may generate mists, observe the OSHA PEL of 5 mg per cubic meter, ACGIH STEL of 10 mg per cubic meter.
<b>Engineering Controls</b>	If use generates a mist or vapor, local exhaust ventilation is recommended. Additional ventilation or exhaust may be required to maintain air concentrations below recommended exposure limits.
<b>Gloves Procedures</b>	Use nitrile or neoprene gloves.

<b>Eye Protection</b>	Safety Glasses.
<b>Respiratory Protection</b>	Under normal use conditions, respirator is not usually required. Use NIOSH/MSHA approved disposable dust/mist mask if the recommended exposure limit is exceeded. Use self-contained breathing apparatus for entry into confined space, for other poorly ventilated areas and for large spill clean-up sites. Consult with an industrial hygienist to determine the appropriate respiratory protection for your specific use of this material. A respiratory protection program compliant with all applicable regulations must be followed whenever workplace conditions require the use of a respirator.

<b>Exposure Limits</b>	None established
<b>Other Exposure Limits</b>	Contains mineral oil. Under conditions which may generate mists, observe the OSHA PEL of 5 mg per cubic meter, ACGIH STEL of 10 mg per cubic meter.
<b>Engineering Controls</b>	If use generates a mist or vapor, local exhaust ventilation is recommended. Additional ventilation or exhaust may be required to maintain air concentrations below recommended exposure limits.
<b>Gloves Procedures</b>	Use nitrile or neoprene gloves.

<b>Eye Protection</b>	Safety Glasses.
<b>Respiratory Protection</b>	Under normal use conditions, respirator is not usually required. Use NIOSH/MSHA approved disposable dust/mist mask if the recommended exposure limit is exceeded. Use self-contained breathing apparatus for entry into confined space, for other poorly ventilated areas and for large spill clean-up sites. Consult with an industrial hygienist to determine the appropriate respiratory protection for your specific use of this material. A respiratory protection program compliant with all applicable regulations must be followed whenever workplace conditions require the use of a respirator.

<b>11</b>	<b>Toxicological Information</b>
-----------	----------------------------------

**-- ACUTE EXPOSURE --**

<b>Eye Irritation</b>	Weak to moderate eye irritant. Does not meet Canadian D2B or EU R36 criteria. Based on data from components and similar materials.
<b>Skin Irritation</b>	May cause skin irritation. Based on data from components or similar materials. Prolonged or repeated skin contact as from clothing wet with material may cause dermatitis. Symptoms may include redness, edema, drying, and cracking of the skin.
<b>Respiratory Irritation</b>	If material is misted or if vapors are generated from heating, exposure may cause irritation of mucous membranes and the upper respiratory tract. Based on data from components and similar materials.
<b>Dermal Toxicity</b>	The LD50 in rabbits is > 2000 mg/Kg. Based on data from components or similar materials.
<b>Inhalation Toxicity</b>	Not expected to be a toxic inhalation hazard. Based on data available from components or similar materials. Inhalation of high concentrations of hydrogen sulfide vapor may cause loss of consciousness and death. Inhalation of lower concentrations may cause headache, dizziness and nausea.
<b>Oral Toxicity</b>	The LD50 in rats is > 5000 mg/kg. Based on data from components or similar materials.
<b>Dermal Sensitization</b>	No data available to indicate product or components may be a skin sensitizer.
<b>Inhalation Sensitization</b>	No data available to indicate product or components may be respiratory sensitizers.

**-- CHRONIC EXPOSURE --**

<b>Chronic Toxicity</b>	Repeated-dose oral toxicity studies in rats using a component contained in this product revealed internal organ effects (i.e., liver and thyroid enlargement). These effects were considered adaptive and were reversible upon cessation of treatment.
<b>Carcinogenicity</b>	This product contains mineral oils which are considered to be severely refined and not considered to be carcinogenic under IARC. All of the oils in this product have been demonstrated to contain less than 3% extractables by the IP 346 test.
<b>Mutagenicity</b>	No data available to indicate product or any components present at greater than 0.1% are mutagenic or genotoxic.
<b>Reproductive Toxicity</b>	No data available to indicate product or components present at greater than 0.1% that may cause reproductive toxicity.
<b>Teratogenicity</b>	There are conflicting reports in the literature concerning the teratogenicity of diphenylamine. However, because the predominant route of exposure was oral (via gavage or diet) and relatively high dose levels were administered in the studies where positive effects were observed, it would not seem to present a workplace hazard.

**-- ACUTE EXPOSURE --**

<b>Eye Irritation</b>	Moderate to strong eye irritation. Based on data from components or similar material.
<b>Skin Irritation</b>	Not expected to be a primary skin irritant. Based on data from components or similar materials. Prolonged or repeated skin contact as from clothing wet with material may cause dermatitis. Symptoms may include redness, edema, drying, and cracking of the skin.
<b>Respiratory Irritation</b>	If material is misted or if vapors are generated from heating, exposure may cause irritation of mucous membranes and the upper respiratory tract similar to that observed with mineral oil. Based on data from components or similar materials. Under good industrial hygiene practices where all exposure limits are observed, respiratory irritation should not be a problem.
<b>Dermal Toxicity</b>	The LD50 in rabbits is > 2000 mg/Kg. Based on data from components or similar materials.
<b>Inhalation Toxicity</b>	Not expected to be a toxic inhalation hazard. Based on data available from components or similar materials.
<b>Oral Toxicity</b>	The LD50 in rats is > 5000 mg/kg. Based on data from components or similar materials.
<b>Dermal Sensitization</b>	No data available to indicate product or components may be a skin sensitizer.
<b>Inhalation Sensitization</b>	No data available to indicate product or components may be respiratory sensitizers.

**-- CHRONIC EXPOSURE --**

<b>Chronic Toxicity</b>	No data available to indicate product or components present at greater than 1% are chronic health hazards.
<b>Carcinogenicity</b>	This product contains mineral oils which are considered to be severely refined and not considered to be carcinogenic under IARC. All of the oils in this product have been demonstrated to contain less than 3% extractables by the IP 346 test.
<b>Mutagenicity</b>	No data available to indicate product or any components present at greater than 0.1% are mutagenic or genotoxic.
<b>Reproductive Toxicity</b>	This product contains para-dodecylphenol. Rats given high, repeated daily doses of para-dodecylphenol by oral intubation experienced adverse reproductive effects. The relevance of these effects to humans is uncertain.
<b>Teratogenicity</b>	This product contains para-dodecylphenol. Pregnant rats given high, repeated daily doses of para-dodecylphenol by oral intubation gave birth to pups with cleft palate and skeletal malformations. The relevance of these effects to humans is uncertain.

<b>Skin</b>	Wash with soap and water. Remove contaminated clothing. Get medical attention if irritation develops. Launder contaminated clothing before reuse.
<b>Inhalation</b>	Remove to fresh air and keep at rest in a position comfortable for breathing. If breathing is labored, administer oxygen. If breathing has stopped, apply artificial respiration.
<b>Oral</b>	DO NOT INDUCE VOMITING. Get immediate medical attention.
<b>Additional Information</b>	Get medical attention advice if you feel unwell.

<b>5</b>	<b>Fire Fighting Measures</b>
----------	-------------------------------

<b>Flash Point</b>	64 °C, 147.2 °F PMCC (Typical)
<b>Extinguishing Media</b>	CO2, dry chemical, or foam. Water can be used to cool and protect exposed material.
<b>Firefighting Procedures</b>	Recommend wearing self-contained breathing apparatus. Water may cause splattering.
<b>Unusual Fire &amp; Explosion Hazards</b>	Vapors may be heavier than air and may travel along the ground to a distant ignition source and flash back. Container may rupture on heating.

<b>6</b>	<b>Accidental Release Measures</b>
----------	------------------------------------

<b>Spill Procedures</b>	Evacuate all non-essential personnel. Personal Protective Equipment must be worn, see Personal Protection Section for PPE recommendations. Remove sources of ignition. Ventilate spill area. Prevent entry into sewers and waterways, dispose of in accordance with all federal, state and local environmental regulation. Pick up free liquid for recycle and/or disposal. Residual liquid can be absorbed on inert material. Check under Transportation and Labeling (DOT/CERCLA) and Other Regulatory Information Section (SARA) for hazardous substances to determine regulatory reporting requirements for spills.
-------------------------	---

<b>7</b>	<b>Handling and Storage</b>
----------	-----------------------------

<b>Pumping Temperature</b>	Not determined.
<b>Maximum Handling Temperature</b>	Not determined.
<b>Handling Procedures</b>	Keep away from potential sources of ignition. Keep containers closed when not in use. Do not discharge into drains or the environment, dispose to an authorized waste collection point. Use appropriate containment to avoid environmental contamination. Do not breath dust, fume, gas, mist, vapors or spray. Use only outdoors or in a well-ventilated area. Wash thoroughly after handling. Empty containers retain material residue. Do not cut, weld, braze, solder, drill, grind or expose containers to heat, flame, spark or other sources of ignition.
<b>Maximum Storage Temperature</b>	Not determined.
<b>Storage Procedures</b>	Do not store near potential sources of ignition. Store in well ventilated place. Keep container tightly closed.
<b>Loading Temperature</b>	Not determined.

<b>8</b>	<b>Exposure Controls/Personal Protection</b>
----------	--

<b>Exposure Limits</b>	None established
<b>Other Exposure Limits</b>	None known.
<b>Engineering Controls</b>	Use material in well ventilated area only. Additional ventilation or exhaust may be required to maintain air concentrations below recommended exposure limits.

<b>Gloves Procedures</b>	Use nitrile or neoprene gloves.
<b>Eye Protection</b>	Safety glasses. If potential for splash or mist exists, wear chemical goggles or faceshield.
<b>Respiratory Protection</b>	Use NIOSH/MSHA approved respirator with a combination organic vapor and high efficiency filter cartridge if recommended exposure limit is exceeded. Use self-contained breathing apparatus for entry into confined space, for other poorly ventilated areas and for large spill clean-up sites. Consult with an industrial hygienist to determine the appropriate respiratory protection for your specific use of this material. A respiratory protection program compliant with all applicable regulations must be followed whenever workplace conditions require the use of a respirator.
<b>Clothing Recommendation</b>	Long sleeve shirt is recommended. Wear either a chemical protective suit or apron when potential for contact with material exists. Launder contaminated clothing before reuse.

**DANGER!**

CAUSES SEVERE SKIN AND EYE BURNS

CAUSES DIGESTIVE TRACT BURNS

MIST OR VAPOR IRRITATING TO EYES AND RESPIRATORY TRACT

POTENTIAL PEROXIDE FORMER

CONTACT WITH WATER MAY FORM FLAMMABLE OR COMBUSTIBLE MIXTURE

HMIS® Hazard Ratings: Health – 3, Flammability – 1, Chemical Reactivity – 0

## 4. FIRST AID MEASURES:

**INHALATION:** Move to fresh air. Treat symptomatically. Get medical attention if symptoms persist.

**EYES:** Immediately flush with plenty of water for at least 15 minutes. If easy to do, remove contact lenses. Call a physician or poison control center immediately.

**SKIN:** Immediately flush with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician or poison control center immediately.

Wash contaminated clothing before reuse. Destroy or thoroughly clean contaminated shoes

**INGESTION:** Call a physician or poison control center immediately. Do NOT induce vomiting. If victim is fully conscious, give a cupful of water. Never give anything by mouth to an unconscious person. If vomiting occurs, keep head lower than the hips to help prevent aspiration.

**GE-520****5. FIRE FIGHTING MEASURES:**

EXTINGUISHING MEDIA: Water spray, dry chemical, carbon dioxide, alcohol foam.

SPECIAL FIRE-FIGHTING PROCEDURES: Wear self-contained breathing apparatus and protective clothing.

HAZARDOUS COMBUSTION PRODUCTS: Carbon dioxide, carbon monoxide, oxides of sodium.

UNUSUAL FIRE AND EXPLOSION HAZARDS: May form peroxides of unknown stability.

**6. ACCIDENTAL RELEASE MEASURES:**

Wear appropriate personal protective equipment. Neutralize spill area and washings with dilute acetic acid. Absorb spill with vermiculite or other inert material, then place in a container for chemical waste.

For large spills, flush spill area with water spray. Dike for later disposal. Prevent runoff from entering drains, sewers, or streams.

**7. HANDLING AND STORAGE:**

PERSONAL PRECAUTIONARY MEASURES: Do not get in eyes, on skin, on clothing.

Avoid breathing mist or vapor. Do not taste or swallow. Use only with adequate ventilation.

Wash thoroughly after handling.

PREVENTION OF FIRE AND EXPLOSION: Keep from contact with oxidizing materials.

Minimize exposure to air. If peroxide formation is suspected, do not open or move container.

Do not allow water to get into container because of reaction.

STORAGE: Keep container closed. Store away from heat and light.

**8. EXPOSURE CONTROLS / PERSONAL PROTECTION:**

COUNTRY SPECIFIC EXPOSURE LIMITS HAVE NOT BEEN ESTABLISHED OR ARE NOT APPLICABLE UNLESS LISTED BELOW.

Diethylene glycol Monoethyl ether	US Workplace Environmental Exposure Level (WEEL) Guides
	Time Weighted Average (TWA): 25 ppm, 140 mg/m <sup>3</sup>

VENTILATION: Good general ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. Use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level.

## GE-520

### 8. EXPOSURE CONTROLS / PERSONAL PROTECTION (cont):

**RESPIRATORY PROTECTION:** If engineering controls do not maintain airborne concentrations below recommended exposure limits (where applicable) or to an acceptable level (in countries where exposure limits have not been established), an approved respirator must be worn. In the United States of America, If respirators are used, a program should be instituted to assure compliance with OSHA Standard 63 FR 1152, January 8, 1998.

**Respirator type:** Air-purifying respirator with an appropriate, government approved (where applicable), air-purifying filter, cartridge or canister. Contact health and safety professional or manufacturer for specific information.

**EYE PROTECTION:** Wear safety glasses with side shields (or goggles) and a face shield. Wear a full face respirator, if needed.

**SKIN PROTECTION:** Wear chemical-resistant gloves, footwear, and protective clothing appropriate for the risk of exposure. Contact health and safety professional or manufacturer for specific information.

**RECOMMENDED DECONTAMINATION FACILITIES:** Eye bath, washing facilities, safety shower.

### 9. PHYSICAL AND CHEMICAL PROPERTIES:

**PHYSICAL FORM:** Liquid

**COLOR:** Dark brown

**ODOR:** Slight

**SPECIFIC GRAVITY:** 1.05 (20°C)

**BOILING POINT:** > 200°C

**SOLUBILITY IN WATER:** appreciable

**pH:** strongly alkaline

**FLASH POINT:** >166°C (method unspecified)

**THERMAL DECOMPOSITION TEMPERATURES:** Thermal stability not tested. Low stability hazard expected at normal operating temperatures.

### 10. STABILITY AND REACTIVITY:

**STABILITY:** Not fully evaluated. Materials containing similar structural groups are normally stable. On long term storage, materials containing similar functional groups form peroxides of unknown stability.

**INCOMPATIBILITY:** Material reacts with strong oxidizing agents, strong acids. Contact with water may form flammable or combustible mixture.

**HAZARDOUS POLYMERIZATION:** Will not occur.

## **3. HAZARDS IDENTIFICATION**

### **3.1 EMERGENCY OVERVIEW**

**Appearance** Yellow

**Physical State** Liquid

**Odor** Ammoniacal

**Hazards of product** CAUSES EYE AND SKIN BURNS.  
MAY CAUSE ALLERGIC SKIN REACTION.  
HARMFUL IF INHALED OR ABSORBED THROUGH SKIN.  
HARMFUL AND CORROSIVE IF SWALLOWED.  
EVACUATE AREA.  
KEEP UPWIND OF SPILL.

MAY CAUSE ASTHMA WITH POSSIBLE LONG-TERM LUNG DAMAGE.  
ASPIRATION MAY CAUSE LUNG DAMAGE.  
MAY CAUSE RESPIRATORY SYSTEM DAMAGE.

### **3.2 POTENTIAL HEALTH EFFECTS**

#### **Effects of Single Acute Overexposure**

## **MATERIAL SAFETY DATA SHEET**

**Product Name:** TETRAETHYLENEPENTAMINE.  
**MSDS#:** 2120

**Effective Date:** 09/01/2004  
**Page** 3 of 14

**Inhalation** Excessive exposure may cause irritation to upper respiratory tract (nose and throat). May cause allergic respiratory response.

**Eye Contact** May cause severe irritation with corneal injury which may result in permanent impairment of vision, even blindness. Chemical burns may occur.

**Skin Contact** Brief contact may cause skin burns. Symptoms may include pain, severe local redness and tissue damage. Classified as corrosive to the skin according to DOT guidelines. Skin contact may cause an allergic skin reaction.

**Skin Absorption** Prolonged or widespread skin contact may result in absorption of harmful amounts.

**Swallowing** Low toxicity if swallowed. Swallowing may result in gastrointestinal irritation or ulceration. Swallowing may result in burns of the mouth and throat. Aspiration into the lungs may occur during ingestion or vomiting, causing tissue damage or lung injury.

### **Chronic, Prolonged or Repeated Overexposure**

**Effects of Repeated Overexposure** Repeated skin application to laboratory animals did not produce systemic toxicity. In animals, effects have been reported on the following organs:

**Other Effects of Overexposure** Inhalation of ethyleneamines may cause sensitization of the respiratory tract and the development of an asthmatic reaction on further exposure. There may be susceptible\* individuals who develop long-term hyperreactive airways, asthma and other respiratory injury following exposure to extremely low concentrations of ethyleneamines, even below the irritation threshold. Other respiratory irritants may produce a reaction in individuals whose airways have become hyperreactive. \*Since there are no definitive screening methods available to identify susceptible individuals, we suggest that people with asthma, or other longstanding respiratory conditions (for example, chronic bronchitis, emphysema, etc.) should be protected from any potential exposure to ethyleneamines. Skin contact may cause sensitization and an allergic skin reaction. Cross-sensitization may occur by skin contact with this material and other amines.

See Section 11 for toxicological information and additional information about potential health effects.

### **3.3 POTENTIAL ENVIRONMENTAL EFFECTS**

See Section 12 for Ecological Information.

## **4. FIRST AID PROCEDURES**

## **MATERIAL SAFETY DATA SHEET**

**Product Name:** TETRAETHYLENEPENTAMINE.  
**MSDS#:** 2120

**Effective Date:** 09/01/2004  
**Page 4 of 14**

### **4.1 INHALATION**

**||** Move person to fresh air; if effects occur, consult a physician.

### **4.2 EYE CONTACT**

**||** Wash immediately and continuously with flowing water for at least 30 minutes. Remove contact lenses after the first 5 minutes and continue washing. Obtain prompt medical consultation, preferably from an ophthalmologist.

### **4.3 SKIN CONTACT**

**||** Immediate continued and thorough washing in flowing water for at least 30 minutes is imperative while removing contaminated clothing. Prompt medical consultation is essential. Wash clothing before reuse. Properly dispose of contaminated leather items such as shoes, belts, and watchbands.

### **4.4 SWALLOWING**

**||** Do not induce vomiting. Give one cup (8 ounces or 240 ml) of water or milk if available and transport to a medical facility. Do not give anything by mouth to an unconscious person.

### **4.5 NOTES TO PHYSICIAN**

**||** Due to irritant properties, swallowing may result in burns/ulceration of mouth, stomach and lower gastrointestinal tract with subsequent stricture. Aspiration of vomitus may cause lung injury. Suggest endotracheal/esophageal control if lavage is done.

Chemical eye burns may require extended irrigation. Obtain prompt consultation, preferably from an ophthalmologist.

May cause respiratory sensitization or asthma-like symptoms. Bronchodilators, expectorants and antitussives may be of help.

Excessive exposure may aggravate preexisting asthma and other respiratory disorders (e.g. emphysema, bronchitis, reactive airways dysfunction syndrome).

Treat bronchospasm with inhaled beta-2 agonist and oral or parenteral corticosteroids.

If burn is present, treat as any thermal burn, after decontamination.

No specific antidote.

Treatment of exposure should be directed at the control of symptoms and the clinical condition of the patient.

## **5. FIRE FIGHTING MEASURES**

# **MATERIAL SAFETY DATA SHEET**

**Product Name:** TETRAETHYLENEPENTAMINE.  
**MSDS#:** 2120

**Effective Date:** 09/01/2004  
**Page** 5 of 14

## **5.1 FLAMMABLE PROPERTIES - REFER TO SECTION 9, PHYSICAL AND CHEMICAL PROPERTIES**

## **5.2 EXTINGUISHING MEDIA**

Extinguish fires with water spray or apply alcohol-type or all-purpose-type foam by manufacturer's recommended techniques for large fires. Use carbon dioxide or dry chemical media for small fires.

## **5.3 FIRE FIGHTING PROCEDURES**

Do not direct a solid stream of water or foam into burning molten material; this may cause spattering and spread the fire.

## **5.4 SPECIAL PROTECTIVE EQUIPMENT FOR FIREFIGHTERS**

Use self-contained breathing apparatus, eye protection, and protective clothing.

## **5.5 UNUSUAL FIRE AND EXPLOSION HAZARDS**

During fire, oxides of nitrogen may be evolved.  
See Section 8.3 - Engineering Controls

## **5.6 HAZARDOUS COMBUSTION PRODUCTS**

Burning can produce the following products: Oxides of carbon and nitrogen. Carbon monoxide is highly toxic if inhaled; carbon dioxide in sufficient concentrations can act as an asphyxiant. Acute overexposure to the products of combustion may result in irritation of the respiratory tract. Thermal decomposition can produce the following decomposition products: Ethylenediamine. Diethylenetriamine. Volatile amines. Ammonia.

# **6. ACCIDENTAL RELEASE MEASURES**

## **Steps to be Taken if Material is Released or Spilled:**

Contain spilled material if possible. Collect in suitable and properly labeled containers. See Section 13, Disposal Considerations, for additional information.

**Personal Precautions:** Evacuate area. Refer to Section 7, Handling for additional precautionary measures. Keep upwind of spill. Ventilate area of leak or spill. Only trained and properly protected personnel must be involved in clean-up operations.

**Environmental Precautions:** Prevent from entering into soil, ditches, sewers, waterways and/or groundwater. See Section 12, Ecological Information.

**1. COMPOSITION / INFORMATION ON INGREDIENTS:**

Propylene oxide methanol adduct CAS# 037286-64-9 98%

**2. HAZARDS IDENTIFICATION:****EMERGENCY OVERVIEW**

*Yellow to dark brown liquid. Low odor. Causes eye irritation.*

**POTENTIAL HEALTH EFFECTS (See Section 10 for toxicological data.)**

**EYE:** May cause moderate eye irritation. May cause moderate corneal injury.

**SKIN:** Prolonged or repeated exposure not likely to cause significant skin irritation. **INHALATION:** Excessive exposure may cause irritation of the eyes, upper respiratory tract, and lungs. Signs and symptoms of excessive exposure may be anesthetic or narcotic effects.

**SYSTEMIC (OTHER TARGET ORGAN) EFFECTS:** Signs and symptoms of excessive exposure may be anesthetic or narcotic effects. Repeated excessive exposures may cause liver and possibly kidney effects.

**TERATOLOGY (BIRTH DEFECTS):** Birth defects are unlikely from the components, propylene glycol monomethyl ether and tripropylene glycol monomethyl ether. Exposures having no adverse effects on the mother should have no effects on the fetus.

**3. FIRST AID:**

**EYES:** Irrigate with flowing water immediately and continuously for 15 minutes. Consult medical personnel.

**SKIN:** Wash off in flowing water or shower.

**INGESTION:** If swallowed, seek medical attention. Do not induce vomiting unless directed to do so by medical personnel.

**INHALATION:** Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, oxygen should be administered by qualified personnel. Call a physician or transport to a medical facility.

**NOTE TO PHYSICIAN:** No specific antidote. Supportive care. Treatments based on judgment of the physician in response to reactions of the patient.

**Potential Health Effects****Routes of Exposure**

Skin. Inhalation Ingestion

**Signs and Symptoms of Acute Exposure**

May be irritating to the eyes, skin, and respiratory system.

- *N-Hexane 110-54-3*

May cause irritation to the eyes, nausea, vertigo, bronchial and central nervous system effects. This material presents an acute aspiration hazard. High or repeated exposures can damage the peripheral nervous system, causing numbness, tingling, and/or muscle weakness in the hands or feet. The onset of health effects associated with n-hexane may be influenced by exposure to additional chemicals such as methyl isobutyl ketone and methyl ethyl ketone.

- *Toluene 108-88-3*

Toluene is of slight acute toxicity, although inhalation exposure may cause dizziness and CNS depression, while ingestion may be fatal if aspiration into the lung occurs. Toluene may increase the sensitivity of the heart, leading to potentially fatal cardiac sensitization. It is moderately irritating to skin and eye.

**Skin**

May cause dermatitis by defatting the skin from prolonged or repeated contact.

**Inhalation**

May cause drowsiness and dizziness.

**Eye**

May be irritating to the eyes.

**Ingestion**

Ingestion would likely cause gastrointestinal tract irritation. Ingestion of this material, followed by vomiting and aspiration of the more volatile components of this material into the lungs, may lead to chemical pneumonia and even death.

**Chronic Health Effects**

**PROCESS FUEL OIL**

Repeated exposure can cause peripheral nerve damage, defatting of the skin eye irritation, headache, giddiness and gastric disturbances. Toluene has known developmental toxicity. Toluene is listed by OSHA and NTP as "Not classifiable as a Human Carcinogen".

- *N-Hexane 110-54-3*

Damage to nerves in hands or feet may occur from prolonged inhalation of n-hexane concentrations of 60 to 240 ppm. Repeated exposure to air concentrations of 500 ppm n-hexane can produce progressively worsening damage to the peripheral nerves.

- *Toluene 108-88-3*

Repeated exposure to high concentrations has been shown to cause neurological changes and hearing loss in animals, and in humans in abuse situations. Repeated or prolonged skin contact may produce systemic toxicity similar to the effects associated with repeated inhalation or ingestion exposures. Repeated or prolonged contact with skin may cause defatting and drying of the skin which may result in dermatitis. May cause developmental toxicity.

**Conditions Aggravated by Exposure**

Personnel with pre-existing chronic respiratory diseases should avoid exposure to this material

**SECTION 4: FIRST AID MEASURES**

---

**General**

Take proper precautions to ensure your own health and safety before attempting rescue and providing first aid. For specific information refer to the Emergency Overview in Section 3 of this MSDS.

**Skin**

Immediately remove excess chemical and contaminated clothing; thoroughly wash contaminated skin with mild soap and water. If irritation persists after washing, seek medical attention. Thoroughly clean contaminated clothing before reuse; discard contaminated leather goods (gloves, shoes, belts, wallets, etc.).

**Inhalation**

Move the exposed person to fresh air at once. If breathing has stopped, perform artificial respiration. When breathing is difficult, properly trained personnel may assist the affected person by administering oxygen. Keep the affected person warm and at rest. Get medical attention immediately.

**Eye**

Thoroughly flush the eyes with large amounts of clean low-pressure water for at least 15 minutes, occasionally lifting the upper and lower eyelids. If irritation persists, seek medical attention.

**Ingestion**

DO NOT induce vomiting. If vomiting does occur, have victim lean forward to reduce risk of aspiration.

**Extinguishing Media**

**Suitable:** SMALL FIRE: Use dry chemicals, CO<sub>2</sub>, water spray or alcohol-resistant foam. LARGE FIRE: Use water spray, water fog or foam. DO NOT use straight streams

**Protection of Firefighters**

**Protective Equipment/Clothing:** Wear an approved positive pressure self-contained breathing apparatus and firefighter turnout gear.

**Fire Fighting Guidance:** Vapors may travel long distances along the ground before reaching a source of ignition and flashing back. Evacuate area and fight from a maximum distance or use unmanned hose holders or monitor nozzles. Heat may generate flammable or explosive vapors; disperse with water spray or cover pooling liquid with foam. Containers can build up pressure if exposed to heat; cool with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of vessel. Always stay away from the ends of tanks.

**Hazardous Combustion Products:** Carbon oxides (CO, CO<sub>2</sub>) and metal oxide fumes of magnesium.

**SECTION 6: ACCIDENTAL RELEASE MEASURES****Release Response**

Eliminate all sources of ignition. Stop leak if without risk. Use water spray or alcohol-resistant foam to reduce vapors. Prevent entry into sewers, basements or confined areas; dike if needed. Depending on the size and nature of the release, all responders may need to be HAZWOPER trained and local, state and federal authorities may need to be notified.

**SECTION 7: HANDLING AND STORAGE****Handling**

Do not handle near heat, sparks, or flame. Avoid contact with incompatible agents. Use only with adequate ventilation/personal protection. Avoid contact with eyes, skin and clothing. Do not enter storage area unless adequately ventilated. Metal containers involved in the transfer of this material should be grounded and bonded.

**Storage**

Keep containers tightly closed when not in use and store in a well-ventilated area. Isolate incompatible materials such as oxidizers. Containers should be clearly labeled. Metal containers used to store this material should be grounded.

**SECTION 8: EXPOSURE CONTROLS AND PERSONAL PROTECTION****Engineering Controls**

Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits.

**Personal Protection**

**Inhalation** Organic vapor or supplied air respirator may be appropriate. Respirator selection and use should comply with OSHA 29 CFR 1910.134 or ANSI Z88.2.

**Skin** For applications where protective clothing is required for greater than one hour, Teflon (PTFE) as a barrier material is recommended. For applications where protective clothing is required for less than one hour, Nitrile Rubber (NBR) as a barrier material may be used. Protective clothing from NBR should be discarded after each use.

**SECTION 11: TOXICOLOGICAL INFORMATION****PRODUCT INFORMATION****Product Summary**

The primary component of this product is Hexane. Components of this product with a significant potential for contributing to acute and chronic health effects are n-hexane, toluene and tetrahydrofuran.

**Acute Toxicity - Effects**

**Inhalation** Acute effects may include vertigo, drowsiness, fatigue, blurred vision, headache and/or eye and throat irritation. Ingestion or inhalation of methanol-containing substances may cause severe metabolic acidosis which may damage the optic nerve causing blind

**Ingestion** When ingested, may cause nausea, vertigo, bronchial and general intestinal irritation, CNS effects and severe metabolic acidosis. Toxicity is related to the degree of acidosis produced and the time interval between exposure and specific treatment.

**Irritation**

**Skin** May be absorbed percutaneously, defatting and irritation of the skin may occur. Toluene has "skin" notation by the ACGIH. This indicates a potential significant contribution to the overall exposure by way of absorption through the skin, including mucous membranes and eyes.

**Eye** This product is expected to be a mild eye irritant.

**Repeated Dose Toxicity**

Weight loss or decreased weight gain with central and peripheral nervous system effects and muscle weakness.

**Reproductive Effects**

Multiple physical deformities, with signs similar to fetal alcohol syndrome, microencephaly, CNS dysfunction, and variable growth deficiencies have occurred in infants born to mothers who chemically abused toluene during pregnancy. Hexane was found to be negative when tested for mutagenicity using the Salmonella/microsome preincubation assay. Hexane did not induce chromosome aberrations in CHO cells or in bone marrow of rats.

**Carcinogenicity**

Damage to nerves in hands or feet may occur from prolonged inhalation of n-hexane concentrations of 60 to 240 ppm. Repeated exposure to air concentrations of 500 ppm n-hexane can produce progressively worsening damage to the peripheral nerves. Toluene has known developmental toxicity. Toluene is listed by IARC as; "Not classifiable as a human carcinogen (Group 3) human evidence is inadequate: animal evidence is inadequate." Toluene is listed by OSHA and NTP as "Not classifiable as a Human Carcinogen".

## Acute Toxicity - Effects

Inhalation The neurotoxic properties of hexane are potentiated by exposure to methyl ethyl ketone. Synergism of n-hexane-induced neurotoxicity with cocontaminate methyl isobutyl ketone exposure has been seen in laboratory animals.

## Reproductive Effects

Exposure to n-hexane may damage the developing fetus.

- Toluene 108-88-3

## Irritation

Skin Moderate skin irritant.

Eye May cause moderate irritation, including burning sensation, tearing, redness or swelling. Effects of eye irritation are reversible.

## Target Organ Effects

Skin. Eye. Central nervous system effects. Respiratory system. Cardiac sensitization.

## Repeated Dose Toxicity

No evidence of systemic toxicity was reported in rats exposed to 1.15 mg/l (300 ppm) toluene vapor for two years, while higher exposures were associated with inflammation and degeneration of nasal epithelial tissue. Rats exposed repeatedly to very high concentrations of toluene resulted in neurological changes and permanent hearing loss. Clinical case reports indicate the occurrence of serious and persistent changes (including tremor, ataxia, memory impairment and possible hearing loss) in humans following deliberate over-exposure to toluene in abuse situations. The relevance of these findings to low level occupational exposure to toluene is not known.

## Reproductive Effects

Studies in animals demonstrate no histopathological lesions in testes or ovaries of rats and mice exposed to 9.4 mg/l (2500 ppm) toluene vapor for 14-15 weeks, and no loss of fertility in male rats after exposure to 7.5 mg/l (2000 ppm) for a similar period of time. Epididymal weights and sperm counts were decreased in one study, but the absence of any adverse effect on reproduction makes the functional relevance of these observations unclear. No reliable human data are available.

## Developmental Effects

Studies in pregnant rats demonstrate that toluene is not a teratogen, however mild fetotoxicity (lower body weight, delayed ossification, delayed physical development) may occur in the absence of maternal toxicity at exposures in the range 1.9-2.8 mg/l (500-750 ppm). Other studies describe adverse effects on learning and cognitive functions in rat pups exposed to 4.5-6.7 mg/l (1200-1800 ppm) in utero, although it is unclear if end-points evaluated in these tests are directly relevant to humans.

## Genetic Toxicity

In vitro and in vivo mutagenicity tests were negative.

## Carcinogenicity

Inhalation studies in rats and mice demonstrate that toluene is not a carcinogen. It has been used extensively as a solvent in rodent skin painting studies with occasional slight increases in tumor incidence reported: an epigenetic mechanism (based on irritation rather than genotoxicity) may underpin these findings. Toluene is considered a Group 3 substance by IARC, not classifiable as to its carcinogenicity to humans.

**SECTION 12: ECOLOGICAL INFORMATION**

---

**PRODUCT INFORMATION**

---

**Ecotoxicity**

When released to the environment, this product will volatilize rapidly. No long term damage to the environment is expected. Operators of water intakes in the vicinity should be notified of releases to water.

**Environmental Fate and Pathway**

This product is expected to rapidly volatilize. Heavier components of this product will not readily biodegrade.

**Persistence and Degradability**

Bioaccumulation: Bioconcentration factor values for hexane, toluene and tetrahydrofuran are not indicative of important bioconcentrations in aquatic organisms.

**COMPONENT INFORMATION**

**Ecotoxicity**

This material may be very toxic to aquatic species.

**Acute toxicity to fish**

LC50 / 24 HOUR goldfish 4 mg/l

LC50 / 96 HOUR salmon, coho. 100 mg/l

**Environmental Fate and Pathway**

Photolysis, hydrolysis or bioconcentration of n-hexane are not expected to be an important environmental fate processes. Biodegradation of n-hexane may occur in soil and water; however, volatilization and adsorption are expected to be far more important fate processes. A Koc range of 1250 to 4100 indicates a low to slight mobility class in soil for n-hexane. In aquatic systems n-hexane may partition from the water column to organic matter contained in sediments and suspended materials. Rapid volatilization from environmental waters is expected.

**Persistence and Degradability**

Stability in Water: In aquatic systems, this material may partition from the water column to organic matter contained in sediments and suspended materials.

Biodegradation: Biodegradation may occur in soil and water, however, volatilization and adsorption are expected to be far more important fate processes.

Bioaccumulation: This material is not expected to bioaccumulate.

**Environmental Fate and Pathway**

Volatilization from water surfaces is expected to be an important environmental fate process. Hydrolysis is not expected to be an important factor in the environmental fate process for this material.

Mobility

Transport between environmental compartments: The atmosphere is the main environmental compartment for the release of toluene. In water, volatilization will result in substantial losses to the atmosphere with a half-life of 1-2 days. A calculated Koc value of 37-160 indicates no significant potential for geoaccumulation.

Persistence and Degradability

Stability in Soil: Volatilization from moist soil surfaces is expected to be an important fate process of this material. The potential for volatilization from dry soil surfaces may exist.

Biodegradation: Readily biodegradable in aerobic conditions.

Bioaccumulation: Log Kow (Fish) <3 This material is not expected to bioaccumulate.

Other Adverse Effects

If released to air, a vapor pressure of 28.4 mm Hg at 25 deg C indicates toluene will exist solely as a vapor in the ambient atmosphere. Vapor-phase toluene will be degraded in the atmosphere by reaction with photochemically-produced hydroxyl radicals; the half-life for this reaction in air is estimated to be 3 days. Toluene may also be degraded in the atmosphere by reaction with nitrate radicals and ozone molecules, but these reactions are too slow to be environmentally important.

## SECTION 3: HAZARD IDENTIFICATION

### Emergency Overview

This material is HAZARDOUS by OSHA Hazard Communication definition.

### Signal Word

DANGER!

### Hazards

Highly flammable. Vapors may form explosive mixtures with air. Vapors can travel to a source of ignition and flash back. Vapors explosion hazard indoors, outdoors or in sewers. Potential developmental hazard. Inhalation hazard. Central nervous system effects. Cardiac sensitization. Moderate eye irritant. Moderate skin irritant. Aspiration hazard. Ingestion

**CMC TAILS - LIGHT SOLVENTS****Ingestion**

Ingestion may cause discomfort and irritation of the gastrointestinal tract and CNS depression (fatigue, dizziness, collapse, coma and death). Aspiration into the lung may cause fatal chemical pneumonitis. May lead to potentially fatal cardiac sensitization.

**Chronic Health Effects**

See component summary.

- *1-Octene 111-66-0*

Repeated or prolonged contact with skin may cause defatting and drying of the skin which may result in dermatitis. Repeated or prolonged exposure may cause nausea, loss of appetite, CNS depression, and general weakness.

- *Toluene 108-88-3*

Repeated exposure to high concentrations has been shown to cause neurological changes and hearing loss in animals, and in humans in abuse situations. Repeated or prolonged skin contact may produce systemic toxicity similar to the effects associated with repeated inhalation or ingestion exposures. Repeated or prolonged contact with skin may cause defatting and drying of the skin which may result in dermatitis. May cause developmental toxicity.

- *Polyolefin wax*

No known chronic health effects.

**Conditions Aggravated by Exposure**

Any pre-existing disorders or diseases of the nervous system, respiratory system, skin, and eyes.

---

**SECTION 4: FIRST AID MEASURES****General**

Take proper precautions to ensure your own health and safety before attempting rescue and providing first aid. For specific information refer to the Emergency Overview in Section 3 of this MSDS.

**Skin**

Immediately remove excess chemical and contaminated clothing; thoroughly wash contaminated skin with mild soap and water. If irritation persists after washing, seek medical attention. Thoroughly clean contaminated clothing before reuse; discard contaminated leather goods (gloves, shoes, belts, wallets, etc.).

**Inhalation**

Move the exposed person to fresh air at once. If breathing has stopped, perform artificial respiration. When breathing is difficult, properly trained personnel may assist the affected person by administering oxygen. Keep the affected person warm and at rest. Get medical attention immediately.

**Eye**

Thoroughly flush the eyes with large amounts of clean low-pressure water for at least 15 minutes, occasionally lifting the upper and lower eyelids. If irritation persists, seek medical attention.

**Ingestion**

If large quantity swallowed, give lukewarm water (pint/ 1/2 litre) if victim completely conscious/alert. Do not induce vomiting. Risk of damage to lungs exceeds poisoning risk. Obtain emergency medical attention.

**Note to Physician**

Do not induce vomiting. However, if vomiting occurs spontaneously, maintain open airway. A chest x-ray should be taken immediately after stabilization of breathing and circulation to document aspiration and detect the presence of pneumothorax. Gastrointestinal decontamination in accidental petroleum distillate ingestions is not recommended, because of the severe aspiration hazard. Gastric lavage is indicated in those patients who require decontamination. Be sure that an endotracheal tube is in place prior to lavage; use cuffed tubes in patients over 7 years of age. Although activated charcoal does not bind petroleum distillate products and may induce vomiting, charcoal may be administered when the physician feels the charcoal may absorb a toxic additive. All contaminated clothing should be removed, and contaminated skin areas washed with lipophilic soap, or green soap, and water.

---

**SECTION 5: FIRE FIGHTING MEASURES**

## CMC TAILS - LIGHT SOLVENTS

## SECTION 8: EXPOSURE CONTROLS AND PERSONAL PROTECTION

**Engineering Controls**

Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits.

**Personal Protection**

**Inhalation** A respiratory protection program that meets OSHA's 29 CFR 1910.134 or ANSI Z88.2 requirements must be followed whenever workplace conditions warrant respirator use.

**Skin** Wear chemical resistant gloves such as: Polyvinyl Alcohol, Teflon, or Viton(TM). Protective clothing including gloves, apron, sleeves, boots, and full head/face protection should be worn. The equipment must be cleaned thoroughly after each use.

**Eye** Use splash goggles when eye contact due to splashing or spraying liquid is possible.

**Additional Remarks**

Selection of appropriate personal protective equipment should be based on an evaluation of the performance characteristics of the protective equipment relative to the task(s) to be performed, conditions present, duration of use, and the hazards and/or potential hazards that may be encountered during use. Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure. Use good personal hygiene practices. Wash hands before eating, drinking, smoking, or using toilet facilities. Promptly remove soiled clothing/wash thoroughly before reuse. Shower after work using plenty of soap and water.

**Occupational Exposure Limits**

LD50 (Oral) Rat 5,580 MG/KG BWT

LD50 (Skin) Rabbit. > 5000 MG/KG BWT

**Irritation**

Skin Moderate skin irritant.

Eye May cause moderate irritation, including burning sensation, tearing, redness or swelling. Effects of eye irritation are reversible.

**Target Organ Effects**

Skin. Eye. Central nervous system effects. Respiratory system. Cardiac sensitization.

**Repeated Dose Toxicity**

No evidence of systemic toxicity was reported in rats exposed to 1.15 mg/l (300 ppm) toluene vapor for two years, while higher exposures were associated with inflammation and degeneration of nasal epithelial tissue. Rats exposed repeatedly to very high concentrations of toluene resulted in neurological changes and permanent hearing loss. Clinical case reports indicate the occurrence of serious and persistent changes (including tremor, ataxia, memory impairment and possible hearing loss) in humans following deliberate over-exposure to toluene in abuse situations. The relevance of these findings to low level occupational exposure to toluene is not known.

**Reproductive Effects**

Studies in animals demonstrate no histopathological lesions in testes or ovaries of rats and mice exposed to 9.4 mg/l (2500 ppm) toluene vapor for 14-15 weeks, and no loss of fertility in male rats after exposure to 7.5 mg/l (2000 ppm) for a similar period of time. Epididymal weights and sperm counts were decreased in one study, but the absence of any adverse effect on reproduction makes the functional relevance of these observations unclear. No reliable human data are available.

**Developmental Effects**

## CMC TAILS - LIGHT SOLVENTS

Biodegradation: Biodegradation may occur in soil and water, however, volatilization and adsorption are expected to be far more important fate processes.

Bioaccumulation: This material is not expected to bioaccumulate.

## C. Personal Protection Information

Ventilation: Use adequate ventilation to control exposure below recommended levels.

Respiratory Protection: For concentrations exceeding the recommended exposure level, use NIOSH/MSHA approved air purifying respirator. When entry into or exit from concentrations of unknown exposure,

use NIOSH/MSHA approved self-contained breathing apparatus (SCBA).

Eye Protection: Use safety glasses with side shields and face shield for splash protection.

Skin Protection: Use gloves resistant to the materials being used (Viton, nitrile, neoprene). Use full-body, long sleeved garments to prevent skin contact.

NOTE: Personal protection information shown in Section C is based upon general information as to normal uses and conditions. Where special or unusual uses or conditions exist, it is suggested that the expert assistance of an industrial hygienist or other qualified professional be sought.

## **D. Handling and Storage Precautions**

Do not get in eyes, on skin or on clothing. Do not breathe vapors, mist, fume or dust. Do not swallow, may be aspirated into lungs. Wear protective equipment and/or garments described in Section C if exposure conditions warrant. Wash thoroughly after handling. Launder contaminated clothing before reuse. Use only with adequate ventilation. Store in a well-ventilated area. Store in tightly closed container. Bond and ground during transfer. Keep away from heat, sparks, and flames.

## **E. Reactivity Data**

Stability: Stable

Conditions to Avoid: Not Applicable

Incompatibility (Materials to Avoid): Oxygen and strong oxidizing agents

Hazardous Polymerization: Will Not Occur

Conditions to Avoid: Not Applicable

Hazardous Decomposition Products: Carbon oxides and various hydrocarbons formed when burned.

## **F. Health Hazard Data**

### **Recommended Exposure Limits:**

See Section B.

The Company recommends a permissible exposure level (8-hr. TWA) of 300 ppm for isooctane (2,2,4-Trimethylpentane).

### **Acute Effects of Overexposure:**

Eye: May cause mild irritation, with stinging and redness of the eyes.

Skin: May cause mild irritation. Repeated or prolonged contact may cause defatting of the skin, resulting in dermatitis.

Inhalation: May cause headache, nausea, weakness, sodation, and unconsciousness.

Ingestion: May cause irritation to intestines. If swallowed, may be aspirated resulting in inflammation and possible fluid accumulation in the lungs.

### **Subchronic and Chronic Effects of Overexposure:**

Unleaded gasoline has produced kidney cancer in male rats only. No comparable kidney disease is known to occur in humans.

Gasolines generally contain benzene which has been designated a carcinogen by the National Toxicology Program (NTP), the International Agency for Research on Cancer (IARC), and the Occupational Safety and Health Administration (OSHA). Benzene may produce blood changes which include reduced platelets, red blood cells, and white blood cells. Also, aplastic anemia, and acute nonlymphocytic leukemia. Benzene has produced fetal death in laboratory animals and caused chromosome changes in humans and mutation changes in cells of other organisms.

Laboratory animals have exhibited a higher degree of narcosis when exposed to both butane and butylene (additive effect), than the degree of narcosis exhibited following exposure to butane or butylene alone.

Isopentane did not produce kidney damage in a subchronic oral laboratory study or in a subchronic inhalation exposure to 4500 ppm and 1000 ppm of a 50/50 mixture of isobutane and isopentane.

Exposure of pregnant rats during gestation to toluene at levels 250 ppm and higher produced some maternal toxicity and embryo/fetotoxicity. A lifetime inhalation study in rats did not show any toxic effects even at the high dose of 300 ppm.

Behavioural signs of hearing loss were observed in rats exposed to toluene subchronically at levels of 1000 ppm or more. Comparable effects have not been reported in humans.

Rabbits exposed eight hours per day, for forty days, to 762-6296 ppm cyclohexane showed no significant effects to the kidney, liver, heart, lungs, spleen, adrenals, intestines or brain.

Isooctane (2,2,4-Trimethylpentane), a component of this product, has produced kidney damage in male rats only in a subchronic oral laboratory study. No comparable health hazard for kidney disease is known to occur in humans.

Methyl-tert-butyl Ether (MTBE) is not readily absorbed through the skin and inhaled MTBE is rapidly eliminated from the body. Inhalation studies determined MTBE is not a neurotoxin, however, high concentrations (8000 ppm) can cause central nervous system depression. Inhalation of MTBE does not cause fetal malformations nor does it interfere with the reproductive capacity.

The in-life portion of the cancer study has just been completed.

Evaluation of selected tissues is ongoing. Early mortality occurred in the mice at 8000 ppm. In the male mice, death appeared linked to an exacerbation of a blockage in the ureter which occurs spontaneously in this strain. Early sacrifice was required for male rats exposed to 3000 and 8000 ppm MTBE due to excessive mortality related to a severe chronic progressive kidney dysfunction. The concentration at which no observed effects occurred different from controls in all studies was 400 ppm.

#### **Other Health Effects:**

Combustion, a normal use of gasoline, results in an exhaust that has been associated with skin cancer in laboratory animals. Skin cancer was observed in these animals when exhaust was concentrated and repeatedly applied to the skin. It is unknown if this route of exposure is relevant to human exposure.

Combustion (burning) of most carbon-containing material forms carbon monoxide. Carbon monoxide inhalation may cause carboxyhemoglobinemia. Chronic exposure to carbon monoxide causes fatigue, poor memory, loss of sensation in fingers, visual disturbances and insomnia.

Carboxyhemoglobinemia is frequently misdiagnosed as flu.

Sensitive sub-populations to the inhalation of carbon monoxide exist.

Carbon monoxide displaces oxygen in the bloodstream and therefore, can adversely affect people with pre-existing heart disease, pregnant women and smokers.

#### **Health Hazard Categories:**

Mutagen ☒ Irritant ☐

Teratogen ☐ Target Organ Toxin ☒ ☒

#### **First Aid and Emergency Procedures:**

Eye: Flush eyes with running water for at least fifteen minutes. If irritation or adverse symptoms develop, seek medical attention.

Skin: Wash skin with soap and water for at least fifteen minutes. If

irritation or adverse symptoms develop, seek medical attention.  
Inhalation: Remove from exposure. If breathing is difficult, give oxygen. If breathing ceases, administer artificial respiration followed by oxygen. Seek immediate medical attention.  
Ingestion: Do not induce vomiting. Seek immediate medical attention.  
Note to Physician: Gastric lavage using a cuffed endotracheal tube may be performed at your discretion.

11	Toxicological Information
----	---------------------------

**-- ACUTE EXPOSURE --**

<b>Eye Irritation</b>	Not expected to cause eye irritation. Based on data from components or similar materials.
<b>Skin Irritation</b>	Not expected to be a primary skin irritant. Based on data from components or similar materials. Prolonged or repeated skin contact as from clothing wet with material may cause dermatitis. Symptoms may include redness, edema, drying, and cracking of the skin.
<b>Respiratory Irritation</b>	If material is misted or if vapors are generated from heating, exposure may cause irritation of mucous membranes and the upper respiratory tract similar to that observed with mineral oil. Based on data from components or similar materials. Under good industrial hygiene practices where all exposure limits are observed, respiratory irritation should not be a problem.
<b>Dermal Toxicity</b>	The LD50 in rabbits is > 2000 mg/Kg. Based on data from components or similar materials.
<b>Inhalation Toxicity</b>	Not expected to be a toxic inhalation hazard. Based on data available from components or similar materials.
<b>Oral Toxicity</b>	The LD50 in rats is > 5000 mg/kg. Based on data from components or similar materials.
<b>Dermal Sensitization</b>	No data available to indicate product or components may be a skin sensitizer.
<b>Inhalation Sensitization</b>	No data available to indicate product or components may be respiratory sensitizers.

**-- CHRONIC EXPOSURE --**

<b>Chronic Toxicity</b>	Repeated-dose oral toxicity studies in rats using a component contained in this product revealed internal organ effects (i.e., liver and thyroid enlargement). These effects were considered adaptive and were reversible upon cessation of treatment.
<b>Carcinogenicity</b>	This product contains mineral oils which are considered to be severely refined and not considered to be carcinogenic under IARC. All of the oils in this product have been demonstrated to contain less than 3% extractables by the IP 346 test.
<b>Mutagenicity</b>	No data available to indicate product or any components present at greater than 0.1% are mutagenic or genotoxic.
<b>Reproductive Toxicity</b>	This product contains para-dodecylphenol. Rats given high, repeated daily doses of para-dodecylphenol by oral intubation experienced adverse reproductive effects. The relevance of these effects to humans is uncertain.
<b>Teratogenicity</b>	This product contains para-dodecylphenol. Pregnant rats given high, repeated daily doses of para-dodecylphenol by oral intubation gave birth to pups with cleft palate and skeletal malformations. The relevance of these effects to humans is uncertain. There are conflicting reports in the literature concerning the teratogenicity of diphenylamine. However, because the predominant route of exposure was oral (via gavage or diet) and relatively high dose levels were administered in the studies where positive effects were observed, it would not seem to present a workplace hazard.

**-- ADDITIONAL INFORMATION --****Other**

<b>11</b>	<b>Toxicological Information</b>
-----------	----------------------------------

**-- ACUTE EXPOSURE --**

<b>Eye Irritation</b>	Weak to moderate eye irritant. Does not meet Canadian D2B or EU R36 criteria. Based on data from components and similar materials.
<b>Skin Irritation</b>	May cause skin irritation. Based on data from components or similar materials. Prolonged or repeated skin contact as from clothing wet with material may cause dermatitis. Symptoms may include redness, edema, drying, and cracking of the skin.
<b>Respiratory Irritation</b>	If material is misted or if vapors are generated from heating, exposure may cause irritation of mucous membranes and the upper respiratory tract. Based on data from components and similar materials.
<b>Dermal Toxicity</b>	The LD50 in rabbits is > 2000 mg/Kg. Based on data from components or similar materials.
<b>Inhalation Toxicity</b>	Not expected to be a toxic inhalation hazard. Based on data available from components or similar materials.
<b>Oral Toxicity</b>	The LD50 in rats is > 5000 mg/kg. Based on data from components or similar materials.
<b>Dermal Sensitization</b>	No data available to indicate product or components may be a skin sensitizer.
<b>Inhalation Sensitization</b>	No data available to indicate product or components may be respiratory sensitizers.

**-- CHRONIC EXPOSURE --**

<b>Chronic Toxicity</b>	Repeated-dose oral toxicity studies in rats using a component contained in this product revealed internal organ effects (i.e., liver and thyroid enlargement). These effects were considered adaptive and were reversible upon cessation of treatment.
<b>Carcinogenicity</b>	This product contains mineral oils which are considered to be severely refined and not considered to be carcinogenic under IARC. All of the oils in this product have been demonstrated to contain less than 3% extractables by the IP 346 test.
<b>Mutagenicity</b>	No data available to indicate product or any components present at greater than 0.1% are mutagenic or genotoxic.
<b>Reproductive Toxicity</b>	No data available to indicate either product or components present at greater than 0.1% that may cause reproductive toxicity.
<b>Teratogenicity</b>	There are conflicting reports in the literature concerning the teratogenicity of diphenylamine. However, because the predominant route of exposure was oral (via gavage or diet) and relatively high dose levels were administered in the studies where positive effects were observed, it would not seem to present a workplace hazard.
